dď protein - protein database search, using Smith-Waterman algorithm

Tabular output Run on: not generated. Mon Mar 13 10:26:03 2000; MasPar time 4.59 Seconds 284.891 Million cell updates/sec

ALIGNMENTS

Description: Perfect Score: Title: >US-09-147-947-6 (117-217) from US09147947A.pep (3 of 6) 764

Sequence: 1 VRLRGGKNEFEGTVEVYASG......KDIWQGGVCPQKMAAAVTCS 101

Scoring table: PAM 150 Gap 11

Searched:

131253 seqs, 12956647 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

a-issued 1:5A_COMB 2:5B_COMB 3:PCT9_COMB 4:backfiles1

Statistics: Mean 26.677; Variance 101.261; scale 0.263

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

dd"t protein - protein database search, using Smith-Waterman algorithm

Mon Mar 13 10:24:02 2000; MasPar time 6.39 Seconds 472.013 Million cell updates/sec

Tabular output not generated.

Title:
Description:
Perfect Score:
Sequence: >US-09-147-947-6
(117-217) from US09147947A.pep (3 of 6)
764
1 VRLRGGKNEFEGTVEVYASG.....KDIWQGGVCPQKMAAAVTCS 101

Scoring table: PAM 150 Gap 11

Searched: 82229 seqs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 __1:swissprot

Statistics: Mean 38.635; Variance 55.528; scale 0.696

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUBUNIT: HETEROTRIMER OF A CATALYTIC (LIGHT) CHAIN, A MUL: (HEAVY) CHAIN, AND A MINI CHAIN.
SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (PROBABLE)
PTM: THE CHAINS ARE DERIVED FROM A SINGLE PRECURSOR THAT:
CLEAVED BY A TRYPSIN-LIKE PROTEASE.
PTM: THE MINI CHAIN MAY BE CLEAVED BY ELASTASE.
SIMILARITY: CONTAINS 2 LDL-RECEPTOR CLASS A DOMAINS.
SIMILARITY: CONTAINS 2 CUB DOMAINS.
                                                                                                             TRYPSINOGEN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs. Sequence 822 AA;
                                                                                                                                                                                                                                                                                      New serine protease expressed in brain tissue - used in screening for potential serine protease inhibitors for drug use claim 1; Page 61-65; 69pp; Japanese.
The present sequence is a serine protease designated BSSP-3, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13-MAY-1999 (first entry)
